Education

PhD in Robotics at Leibniz University Hannover, Hanover, Germany	Mar 2021 – Present
M.Sc. in Mechanical Engineering (grade: 1.0) at LUH, Hanover, Germany	Oct 2017 – Dec 2020
B.Sc. in Mechanical Engineering (grade: 2.2) at LUH, Hanover, Germany	Apr 2014 – Sept 2017

Experience

Research Associate, Institute of Mechatronic Systems – Hanover, Germany March 2021 – Present

- Developed open-source methods for perception and reactive safety strategies in robotic applications
- Technical focus included interaction control, dynamics, simulation, classification and transfer learning
- Authored five scientific publications, including a best-paper award; co-chaired sessions and presented research at major robotics conferences (ICRA, IROS, ...)
- Supervised 23 student theses and guided 17 research assistants in research and lecture projects
- Taught course (150 students) on parallel robots, optimization, vision-based control and machine learning

Master Student, IAV Automotive Engineering – Gifhorn, Germany Jun 2020 – Nov 2020

- Thesis on physics-based machine learning for emission modeling (graded 1.0) and published research results of dimensionality reduction and regression in peer-reviewed journal and international conference

Research Intern, UNESP – Bauru, Brazil Oct 2019 – Dec 2019

- Designed and executed structural analysis experiments on carbon fiber-reinforced polymers using piezoelectric membranes and MATLAB-based data acquisition
-

Projects

Developed Robot-Agnostic Communication System 🌐 [aranmoha/testbench](https://github.com/aranmoha/testbench)

- Designed and tested robot communication using EtherCAT, EtherLab, and Simulink for real-time kinematics, dynamics modeling, and logic implementation
- Integrated cameras, force-torque and inertial sensors using Python, C++ and ROS 1 for sensor fusion and reactive motion planning

Designed Interaction Control and Real-Time Contact Classification 🌐 [aranmoha/control](https://github.com/aranmoha/control)

- Developed safe impedance-controlled robots and combined physical modeling with machine learning in Python, and deployed contact detection on real robots via MATLAB/Simulink
- Applied domain randomization in simulation (MATLAB/MuJoCo) to train domain-adversarial neural networks with PyTorch for sim-to-real transfer

Unified Contact Detection and Reaction Framework for Safe Robot Execution 🌐 [aranmoha/reaction](https://github.com/aranmoha/reaction)

- Designed contact-aware motion-execution framework combining detection, classification, and handling of collision and clamping contacts through redundancy-based control
 - Integrated self-collision avoidance and singularity handling into multi-level robot-control schemes; validated in software-in-the-loop and real-world tests
-

Skills

Software: MATLAB/Simulink, Python, C++, ROS 1, Autodesk Inventor, MS Office

Tools: scikit-learn, PyTorch, Tensorflow, MuJoCo, Git, Bash, Jupyter Notebook, OpenCV, SciPy
